Project Dscription - UniTracker is a smart academic mobile application designed to help students easily track their classes and professors in real time. It provides information about which class is currently running, which professor is teaching, and in which classroom the lecture is being conducted.

The app includes a live timetable feature that automatically highlights the ongoing class, making it easy for students to stay updated without confusion. It also shows important details such as subject name, faculty name, time slot, and room number.

Additionally, UniTracker offers a search feature to find any professor and check their current location, whether they are in a class or in their cabin. This helps save time and reduces the need for manual inquiries.

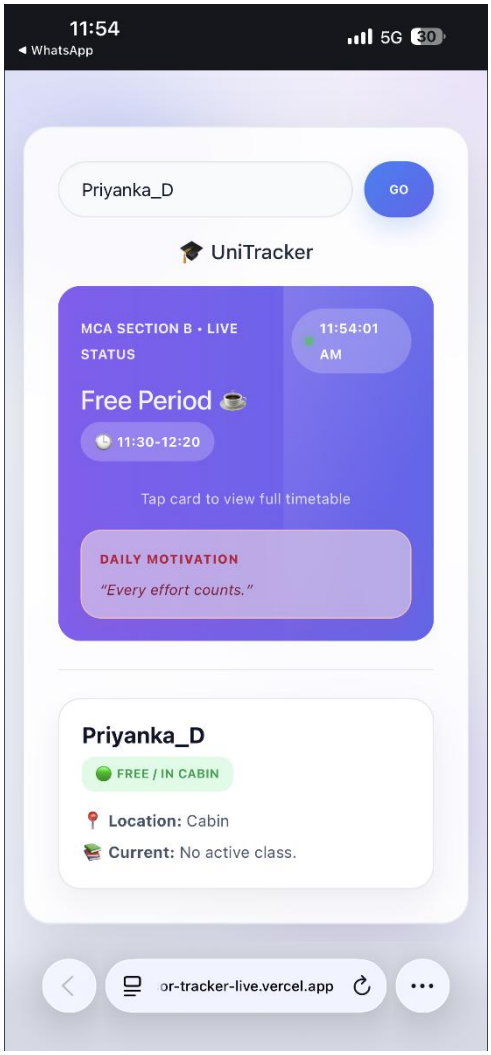
Overall, UniTracker improves academic efficiency by providing a simple, organized, and real-time solution for managing schedules and tracking faculty within a collegeenviron

The displayed screen represents the main dashboard of the **UniTracker** application, designed to provide real-time academic information in a simple and user-friendly manner. At the top, a search bar allows users to enter a faculty member's name, such as *Priyanka_D*, and a "GO" button triggers the system to fetch relevant data. This acts as the primary interaction point for retrieving professor details.

Below the header, the application title "UniTracker" establishes the platform's identity. The central focus of the screen is the **live status card** for MCA Section B. This card dynamically displays the current class status, which in this case is shown as a **"Free Period"** along with the time slot (11:30–12:20). A real-time digital clock with a green indicator confirms that the data is actively updated. This helps students quickly determine whether a class is ongoing or not.

The card also includes a short instruction encouraging users to view the full timetable. Additionally, a **daily motivation section** displays a quote, adding a positive and engaging element to the interface.

At the bottom, a **faculty information card** shows the result of the search query. It displays the professor's name along with a status label **"FREE / IN CABIN"**, indicating availability. Additional details such as location (cabin) and current status (no active class) are provided.



This screen displays the **full timetable view** for *MCA Section B* in the UniTracker application. It is presented in a structured table format, where the schedule is organized by **time slots (rows)** and **days of the week (columns)** from Monday to Friday. Each cell represents a specific lecture scheduled at a particular time and day.

Within each time slot, subjects such as RPL, AADL, DC, A&DoA, and others are clearly mentioned. Along with the subject name, the interface also shows the **faculty member's name** and the **assigned classroom (e.g., CS02, CS04, CS09)**. This provides complete information in a single view, making it easy for students to understand their schedule.

Empty slots are marked with a dash (-), indicating no class during that period. The clean layout ensures readability and quick navigation. A close (×) button is provided at the top for exiting the timetable view.
